Ex. No: 11	ADD IOS AS A BUILD TARGET
Date of Exercise	29.09.2026
Git-hub Host Link	https://urk23cs1203.github.io/Flutter-Lap-Ex11/

Aim:

To create a Flutter application with an iOS build target, test the application, and deploy its Flutter Web version using GitHub Pages.

Description:

This experiment demonstrates how a Flutter application can be configured with **iOS as a target platform**. Flutter provides an ios project folder containing the files required for iOS development through Xcode. The application interface and functionality can be tested on an iOS Simulator or physical iOS device when a macOS and Xcode environment is available.

Procedure:

Step 1: Check the Flutter installation and development environment using: flutter doctor

Step 2: Check the available devices using: flutter devices

Step 3: Create a new Flutter application with iOS platform support using: flutter create ios_app

Step 4: Navigate to the application directory: cd ios_app

Step 5: Verify the iOS project folder is created inside the Flutter application.

Step 6: Open the iOS project in Xcode on macOS using: open ios/Runner.xcworkspace

Step 7: Select an iOS Simulator or connected iOS device in Xcode and run the Flutter application.

Step 8: Test the application by checking the UI elements, text, buttons, navigation, images, and screen transitions.

Step 9: Build the Flutter application for the required iOS target using the appropriate Flutter/Xcode build process on macOS.

Step 10: Test the application functionality. In the available development environment, the application was run successfully and the Test Button was verified to display the success message.

Program:

```
import 'package:flutter/material.dart';

void main() => runApp(const MyApp());

class MyApp extends StatelessWidget
  { const MyApp({super.key});

  @override
  Widget build(BuildContext context)
    { return
    MaterialApp( debugShowCheckedModeB
    anner: false, title: 'iOS Flutter App',
      theme: ThemeData(
        primarySwatch: Colors.deepPurple,
        scaffoldBackgroundColor: const Color(0xFFF3E5F5),
      ),
      home: const HomePage(),
    );
  }
}
class HomePage extends StatelessWidget
  { const HomePage({super.key});

  @override
  Widget build(BuildContext context)
    { return Scaffold(
      appBar:
        AppBar( title:
        const Text(
          'iOS Flutter Application',
          style: TextStyle(color: Colors.white),
        ),
        backgroundColor: Colors.deepPurple,
        centerTitle: true,
      ),
      body:
        Center( child:
        Column(
          mainAxisSize: MainAxisSize.min,
          children: [
            const
              Icon( Icons.phone_iph
              one, size: 80,
              color: Colors.deepPurple,
            ),
```

```
        const SizedBox(height: 15),

        const Text(
          'Flutter iOS App',
          style:
          TextStyle( fontSize:
          26,
            fontWeight: FontWeight.bold,
            color: Colors.deepPurple,
          ),
        ),
        const SizedBox(height: 10),

        const Text(
          'Experiment 11\nAdd iOS as a Build Target',
          textAlign: TextAlign.center,
          style: TextStyle(fontSize: 18),
        ),
        const SizedBox(height: 25),

        ElevatedButton( onPres
          sed: () {
            ScaffoldMessenger.of(context).showSnackBar( con
              st SnackBar(
                content: Text('Button clicked successfully!'),
              ),
            );
          },
          child: const Text('Test Button'),
        ),
        const SizedBox(height: 15),

        const Text(
          '✓ Application Ready',
          style: TextStyle(  color:
          Colors.green,
            fontWeight: FontWeight.bold,
          ),
        ),
      ],
    ),
  ),
 );
 }
}
```

Output:

Flutter Demo
Ask Gemini
urk23cs1203.github.io/Flutter-Lap-Ex11/
Dimensions: iPhone 16 393 x 852 Fit to window No throttling 'Save-Data': default

RESULT
The Flutter application was successfully created with an **iOS build target**, tested as a Flutter web application, and deployed successfully on **GitHub Pages**.
